```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The method is useful for detecting SNP in FGF CC genome, where the target portion includes the nucleotide residue located CC at position 69 of ADT97901. The method is useful for assessing CC the relative susceptibility of a mammal to cancer (especially ossophageal CC cancer), which shows an association with the presence of the C-allele. CC The cancer is chosen from ossophageal cancer is ossophageal squamous cell carcinoma. The present sequence is a fagman PCR probe used to genotype in the UTR of FGF-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC comprising a sequence complementary to ADT97901, a vector comprising a SNP in the FGF-3 gene in a mammal (involves isolating CC ADT97901 operably linked to a reporter gene, a host cell comprising the CC vector, detecting a SNP in the FGF-3 gene in a mammal (involves isolating CC a nucleic acid sample from the mammal, and determining whether a cytosine CC or thymine is present at position 69 ofADT97901), a kit for performing CC the method (comprising a first oligonucleotide probe which anneals CC generic ally with the target portion of the mammal's genome, where the first fluorescent label and a first fluorescence CC quencher attached to its separate nucleotide residues and the target CC portion includes the nucleotide residue located at position 69 of ADT97901, and a pair of primers for amplifying a reference portion of the CC ADT97901, and a pair of primers for amplifying a reference portion of the CC alpman, where the reference portion includes the nucleotide residue CC enome, where the target portion includes the nucleotide residue CC at position 69 of ADT97901. The method is useful for detecting SNP in FGF CC annear in a mammal, preferably a human, and is also useful for assessing the relative susceptibility of a mammal to cancer (sepecially ossphageal CC and neck cancer. The ossphageal cancer is cosephageal squamous cell cc carcinoma. The present sequence is a Tagman PCR probe used to genotype individuals for the T SNP in the UTR of FGF-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated nucleic acid molecule having single nucleotide polymorphism in upstream untranslated region of fibroblast growth factor 3 gene, useful for assessing related susceptibility of mammal to cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                upstream untranslated region (UTR) of fibroblast growth factor (FGF)-3 gene sequence (ADT97901) with a single nucleotide polymorphism (SNP)at position 69. Also included are an isolated nucleic acid molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  04-NOV-2004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides an improved expression system for the production of recombinant polypeptides utilizing auxotrophic Pseudomonas cell selectable markers. The invention also provides improved recombinant protein production in host cells through improved regulation of expression. The present sequence is the PCR primer used to construct pyrf selection marker system in a Pseudomonas fluorescens host cell expression

CC nucleotides (3) a recombinant expression vector (IV) comprising (III);

(C) (4) a host cell comprising (IV); (5) an Oligonucleotide molecule (V)

(C) (4) a host cell comprising (IV); (5) an Oligonucleotide molecule (V)

(C) (4) a host cell comprising (IV); (5) an Oligonucleotide molecule (V)

(C) (4) a host cell comprising (IV); (5) an Oligonucleotide molecule (V)

(C) (4) a host cell comprising (IV); (5) an Oligonucleotide molecule (V)

(C) (4) a host cell comprising (IV); (5) an Oligonucleotide molecule (V)

(C) (4) a host cell comprising (IV); (5) an Oligonucleotide molecule (V)

(C) (4) a host cell comprising (IV); (6) an isolated antibody

(C) (4) a host cell comprising (IV); (6) an isolated antibody

(C) (4) a host cell complementary to a nucleotide sequence

(C) (VI) that binds to an epitope on SEQ ID NO:1. Human ARTS1 has cytostatic

(C) (VI) that binds to an epitope on SEQ ID NO:2; and (6) an isolated antibody

(C) (VI) that binds to an inhibitor of proliferation of the suseful for protein activity which involves performing a test caspase-1 protease

(C) caspase-1 protease protein with a caspase-1 substrate such as FKBP46

(C) protein in the presence of the test compound, determining the level of component of processing of a caspase-1 substrate by caspase-1 protease

(C) protein in the absence of the test compound, (I) and (II) are useful for protease protein in the absence of the test compound, (I) and (II) are useful for contenting abnormal cell growth in mammalian subjects. (II) is useful for contenting protein (V) is useful as a probe in oligonucleotide hybridisation content the detection of the AFCS. The present sequence represents a PCR content of the case of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 chromosome 13,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel ADP-ribosylation factor-like tumor suppressor 1 (ARTS1) useful for identifying modulators of Caspase-1 protease protein and for preventing abnormal cell growth in mammalian subjects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes the human ARTS1 (ADP-ribosylation factor-
like tumour suppressor 1) protein (I). The human ARTS1 gene is located on
chromosome 13, more specifically to 13q14. Also described: (1) an
isolated nucleic acid molecule (II) comprising a sequence that encodes
(I), (2) an isolated nucleic acid molecule (III) comprising the 3791
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQ ID NO 14; 47pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ននិនិនិនិនិនិ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
The present invention describes the use of an HIV Tat protein or CC polynucleotide, an HIV Nef protein or polynucleotide, or an HIV Tat CC protein or polynucleotide linked to an HIV Nef protein or polynucleotide, or and an HIV Tat CC and an HIV Gp120 protein or polynucleotide in manufacturing a vaccine for CC a prime-boost delivery for the prophylactic or therapeutic immunisation CC of humans against HIV. The protein or polynucleotide is delivered via a CC bombardment approach. Also described: (1) a recombinant DNA molecule CC comprising a Nef and/or Tat and/or gp120 gene in a vector in which the CC gene of interest is inserted 3' to an enhanced HCMV IEI promoter; (2) CC particles, preferably gold particles, coated with recombinant DNA CC comprising at least two different vaccine compositions including: (a) a kit CC composition comprising particles coated with DNA encoding gp120 and nef CC and/or tat or nef-tat; and (b) a composition comprising gp120 and nef CC coated onto the particles. The HIV proteins or polynucleotides are used CC coated onto the particles. The HIV proteins or polynucleotides are used CC to produce vaccines having anti-HIV activity. The recombinant DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

Isolated clones (see AAT90347-51) encode peptides (AAW26566-73) that share the C-terminal sequence Ala-Pro. These peptides can be used in an antigen composition to elicit an immune response, preferably a cytotoxic T lymphocyte response, specifically as a polyvalent tumour cell vaccine in conjunction with a cancer whole cell vaccine therapy for human melanoma. The peptides can also be used to enhance an immune response, treat and diagnose cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Use of an HIV Tat, Nef or gp120 protein or polynucleotide i manufacturing a vaccine for a prime-boost delivery for the or therapeutic immunization of humans against HIV.

                                                                                                                                                                                                                                             The present invention relates to postnatal periodontal ligament stem cells (PDLSCs). The invention is useful for periodontal tissue regeneration, periodontal disease treatment and differentiation of the cells and methods of tissue cryopreservation. The invention is also useful in cell therapy and in medical therapy e.g. for treating trauma. The present sequence is the human class II bHLH protein scleraxis (SCX) gene specific primer. This sequence is used in the isolation and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated periodontal ligament multipotent stem cell, useful generating periodontal tissue or cells in a subject to reduce or ameliorate trauma such as periodontal disease or physical injury care.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      molecule can be used in manufacturing an HIV vaccine for the prophylactic or therapeutic immunisation of humans. The present sequence represents an oligonuclectide primer for sequencing optimised gp120, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-JUN-2005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cell therapy; stem cell; trauma; tranquilizer or vulnerary; injury; periodontal disease; antiinflammatory; mouth disease; scleraxis gen

(I) is useful for immobblising a target nucleic acid sequence by attaching a adapter nucleic acid (AB000010-AB013409) to a target nucleic acid to form a modified target nucleic and contacting the modified target nucleic acid with (I). The steps o above method is useful for detecting a target nucleic acid, which fur comprises detecting the presence of the modified target nucleic acid
                                                                                                                                           Oligonucleotide
                                                                                                                                                                                        Oligonucleotide adapter/capture probe 5859
                                                                                                                                                                                                                                                                                                                                         ABQ05868 standard; DNA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

(I) is useful for immobilising a target nucleic acid sequence by attaching a adapter nucleic acid (ABQ00010-ABQ13409) to a target nucleic acid to form a modified target nucleic acid and contacting the modified target nucleic acid which (I). The steps of above method is useful for detecting a target nucleic acid, which further comprises detecting the presence of the modified target nucleic acid
                         Array comprising adapter sequences useful for immobilizing or detecting target nucleic acid sequence, has different addresses comprising different specific capture probes.
                                                                                                                                                                                                                                                                                                             Oligonucleotide array; adapter sequence; probe; ss

                                                                                                                                                         AASO7401-AASO7571 represent REVOLUTA (REV) coding sequences and PCR primers of the invention. The REV nucleic acid sequences were isolated from plants such as Arabidopsis thaliana, tomato, corn, barley and rice. The REV gene is required to promote the growth of apical meristems, but has an opposite effect on mersitems of leaves, floral organs and stems, such that it acts to limit cell division reducing the rate of plant growth and final size of the tissue. Therefore, loss of functional REV leads to increases in the size of floral organs, leaf and stem tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an oligonucleotide array (I) comprising at least 25 different addresses (adapter sequences) with each comprising a different capture probe selected from a group consisting of the sequences given in ABQ00010-ABQ13409. (I) is useful for immobilising a target nucleic acid sequence by attaching a daspter nucleic acid (ABQ00010-ABQ13409) to a target nucleic acid for ma modified target nucleic acid and contacting the modified target nucleic acid which (I). The steps of above method is useful for detecting a target nucleic acid, which further comprises detecting the presence of the modified target nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated protein,
                             DNA encoding the REV protein is useful for modulating plant cell division. The mutant REV DNA is also useful for producing transgenic plants with modulated cell division. These transgenic plants can be used to increase crop yield in cereals and fruits, and as a potential source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Revoluta; Rev; corn; barley; rice; tomato; PCR primer; apical meristem; leaf; floral organ; stem; transgenic plant; crop yield; cereal; fruit; pharmaceutical; industrial; ss.

                                            CC artificial chromosome of the invention. The yeast artificial chromosome CC (YAC) vectors contain a reporter gene and transgenic mammals produced CC using them may be used to screen for an agent affecting nucleotide CC expression and gives easier monitoring of in vivo expression. The vector is used in the production of transgenic mammals for testing potential CC pharmaceutical or veterinary agents. pYAM4 is used to amplify YAC. The CC assay may be used to screen for agents useful in treatment of disturbance of circadian function, sleep disorders, eating disorders premenstrual CC dysfunction. The agents thus detected may be used for treatment of dysfunction. The agents thus detected may be used for treatment of CC disorders related to the expression pattern of a nucleotide such as those and more related to the expression pattern of a nucleotide such as those CC above. The vectors have more concentrated YAC DNA, which allows better and more related to the expression and the vectors allow for gene CC overexpression (3-5 fold) and easy site determination. The pyAM4 CC amplification vector does not contain the thymidine kinase gene, which could be caused male infertility in transgenic mice
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

RESULT 14
AAC85242
The sequences given in AAC85227-50 are primers which were used to CC determine the size of the integrated YAC 35D8/D6 and YAC MSC7E526/V12 CC constructs in a transgenic founder animal. The constructs were prepared CC from novel yeast artificial chromosome (YAC) vectors each of which CC comprises a centromere, two telomeres, at least one origin of CC replication, an internal ribosomal entry site (IRES), and a selection CC gene that is specifically removable from the vector. The resulting YAC CC that can affect the expression pattern of a nucleotide sequence of CC interest (NOI) or the activity of its expression product. The identified agents are potentially useful as pharmaceutical and veterinary agents for CC treating disorders of circadian function; sleep or eating disorders; cCC premenstrual syndrome; autoimmune diseases; birth defects in women and/or CC excual dysfunction, and also as lead compounds for developing agents with CC compositions. The new vectors provide high YAC copy numbers and allow casy monitoring (in vivo) of the expression pattern of NOI; composition of NOI and a reporter gene; and determination of the stress where NOI is expressed. Incorporation of IRES allows expression of the than two nucleic acid sequences (e.g. NOI plus a reporter of more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local Similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   გ
                                                                        The invention discloses a microarray comprising a plurality of nucleic caid probes including one of 2,018,500 fully defined sequences, or its CC perfect match, perfect mismatch, antisense match or antisense mismatch. CC Also disclosed is a method of gene expression analysis. The array is used CC in monitoring gene expression levels by hybridisation to a DNA library. CC in analysis of genetic variation or in hybridisation to a DNA library. CC in analysis of genetic variation or in hybridisation to a DNA library. CC in analysis of genetic variation or in hybridisation to a DNA library. CC of at least one target sequence. The method of analysis comprises CC of at least one target sequence. The method of analysis comprises CC incleic acid probes and detecting the hybridisation. The nucleic acid probes and detecting the hybridisation. The nucleic acid CC gene expression levels, identifying biallelic markers or polymorphisms, CC or family members of a gene and a cross-species comparises monitoring CC gene expression to identify or detect the sequence. The array of nucleic acid could be supported in in situ hybridisation, in Southern, Northern or dotonot hybridisation to identify or detect the sequence or specific CC mutations of any gene, in mapping the 5' termini of mRNA molecules by CC primer extensions or in screening cDNA or genomic libraries or subclones CC isolated and previously sequenced. The sequence of the collated and probes incorporated in the microarray. Note: The sequence CC data for this patent can also be obtained in electronic format directly cross the collated and sequence of sequence of the collated sequence of the collated sequence of the collated sequence of the collated sequence of the sequence of the collated sequence of the collated sequence of the sequence of the collated sequence of the sequence of the collated sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New array of nucleic acid probes, useful for in situ hybridization, in Southern, Northern or dot-blot hybridization to identify or detect the sequence or specific mutations of any gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 EST; ss; probe; expressed sequence tag; microarray; gene expression; genetic variation; biallelic marker; polymorphism; human; cross-species comparison.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human microarray DNA oligonucleotide SEQ ID NO 88520

                                                                                                                                                                                                                                                                                                                                                                                                                               10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pND42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XLLO-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Biomedical Polymers Research Bldg.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative aggrose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pND42 (gi 4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid Rl. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

/clone lib="Exelixis P element XP insertions"
/note="Vector: P element XP (GenBank accession number AY5.5149), An isogenic w- Drosophila melanogaster strain was mutagenized by remobilization of transposable elements. For the P element XP, we selected an easily mobilized ammunition element among inserts hopped onto the Binsinscy balancer. New insertions were collected in vials from dysgenic females using the standard chromosomal source of transposase, delta2-3. All lines were mapped to a chromosome by standard genetic methods, examined for homozygous viability and used for recovery of flanking genomic sequence by inverse PCR."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWH2 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt end-sin high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid Rl. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /lab host="E.
